

Data in Motion: Collected, Connected, Deployed

FIELDBOSS + CEDES Elevate is where smart elevator data meets powerful field service. This integration helps elevator companies boost safety, cut downtime, and stay ahead of maintenance issues before they become problems.

CEDES Elevate is a sensor-based monitoring platform that captures key elevator performance data — shutdown events, door delays, ride counts, vibration patterns, and environmental anomalies. Through API integration, **FIELDBOSS** turns this real-time data into action.

The FIELDBOSS-CEDES Contractor Advantage

Closed-Loop Service Automation

Go from alert to resolution seamlessly. Every step is tracked from beginning to end.

Built-In Workflow Compatibility

The integration fits right into the tools your mechanics and office staff already use.

Two-Way Data Sync

FIELDBOSS pushes resolution data back to CEDES, helping improve future alert accuracy and insight.

Real-World Wins

Fewer False Dispatches

Validate alerts before sending a tech—save time, save money.

Automated Workflows

Turn issues into actions with minimal manual intervention.

Improved Elevator Uptime

Faster detection and dispatch means less downtime for your customers.

Built-In Audit Trails

Simplify compliance and build trust with clear service records.

Higher Mechanic Productivity

Equip your team with the context they need to work smarter.

Customer Trust

Grow your business by maintaining lasting relationships with building owners.

Connecting Insights to Actions for Smarter Elevator Service

FIELDBOSS + CEDES connect real-time elevator insights with responsive service execution. From the first alert to final resolution, every step is automated and tracked ensuring nothing falls through the cracks. It's a closed-loop system that helps elevator companies act faster, boost safety, and keep equipment performing at its best.

How It Works
