

Smart elevator solutions boost efficiency of hospital operations

In hospitals, efficient patient transport directly impacts care quality and staff productivity. When every minute counts, reliable elevator operations become critical. The FACT Group offers consulting and services to support reliable operations in over 230 healthcare facilities. In search of a solution to improve the availability and performance of their elevators, FACT decided to implement our remote monitoring platform – and got measurable results from the start:

Eduard Eberling

Head of Elevator Planning
FACT Gruppe

„By installing CEDES Elevate, we significantly increased the capacity and availability of the elevators in a short period of time. The ongoing benchmarking allows us to identify and optimize logistical processes and issues in hospital operations. We haven't come close to achieving this with any other products we tested. Based on the results from pilot installations, we have equipped additional elevators with CEDES Elevate. Our goal is to integrate all elevators in order to gain a global view of the critical infrastructure.“

More about
FACT

CEDES

Predictive maintenance with CEDES Elevate

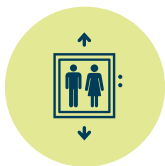

24/7 elevator health monitoring

Advanced monitoring enables you to detect and fix issues early to prevent shutdowns, reduce downtime and extend the life of your equipment.

All assets under control

Based on data collected by light curtains, this controller-agnostic solution can be installed in any elevator, regardless of its brand, model, or age.

Smart traffic insights

Tracking elevator usage reveals where problems occur and how people move through the building, allowing managers to improve service and passenger flow.

Capital planning confidence

Equipment and traffic data provide a clear picture for smarter budgeting and long-term investment decisions.
