

Optical sensors for garage door safeguarding

CEDES offers a wide range of products that allow safeguarding of residential garage doors in a cost competitive way. Key advantage, using optical sensors, is that any physical contact between the door and the persons/ objects is prevented. This increases safety and comfort for people and prolongs the life span of the installed door. CEDES products are well proven in the industry and have, depending on the type, a TÜV safety certification.

ELS 500 – The robust single beam sensor

- ▶ Fast, easy mounting w/o additional tool
- ▶ Applicable to all door types up to 20m
- ▶ Long life span due to robust housing (fully potted)

GridScan/Mini – The safe multi beam sensor

- ▶ Fast easy mounting in the guide rail or in front of the door
- ▶ Reliable protection due to multi element distribution over the edge lengths
- ▶ Long life span due to robust housing (IP67)
- ▶ TÜV approved
