CEDES Elevate powers ENINTER's next-generation service strategy

CEDES is pleased to announce a strategic cooperation agreement with Ascensores ENINTER, one of Spain's leading independent elevator companies, to deploy the CEDES Elevate predictive maintenance platform across ENINTER's elevator portfolio, supporting a new era of data-driven maintenance and service excellence.

Under the agreement, ENINTER will begin deploying CEDES Elevate, CEDES' controller-agnostic solution for elevator monitoring and predictive maintenance, across its installed base. The first rollout phase will start in September 2026, when multiple elevators will be equipped with cegard/Smart 6-I, our latest super-slim light curtains with visual signalling of the door status, and connected to CEDES Elevate. The solution transforms elevator door sensors into a continuous source of operational insights, helping service providers move from reactive maintenance toward predictive, data-driven service models.

Subject to successful implementation and business validation, the deployment is expected to expand significantly over the coming years. The project will connect thousands of elevators to the CEDES Elevate platform, enabling ENINTER to optimize maintenance operations, increase service efficiency, reduce unplanned downtime, and leverage asset-specific data to identify modernization opportunities tailored to individual elevators. The partnership also supports ENINTER's ambitious growth plans in Spain and across other European markets by providing scalable digital infrastructure and actionable fleet intelligence.

"We are proud that ENINTER has chosen to scale CEDES Elevate after successfully validating the platform in a pilot deployment. ENINTER's decision demonstrates confidence in our vision of data-driven elevator management and predictive maintenance," said Patrick Bass, CEO of CEDES. "Together, we will continue to prove that CEDES Elevate delivers on its promise of helping elevator service providers improve uptime, optimize maintenance efficiency, and unlock new value from their installed base."

About ENINTER

Founded in 1973, Ascensores ENINTER has grown from a multi-brand elevator maintenance company into one of the most important players in Spain's vertical transportation sector. The company operates a technology and production center in Cornellà de Llobregat near Barcelona and maintains a broad service network across Spain and Southern Europe. ENINTER's mission is to improve people's quality of life by transforming mobility into an accessible, safe, and efficient experience.

About CEDES

The CEDES Group offers innovative solutions for elevators, escalators, industrial doors, and warehouse management systems in more than 60 countries. It develops intelligent and safe sensing, control and communication systems that provide actionable data streams for higher operational and maintenance efficiency. The product portfolio ranges from simple optical sensors, through highly complex 3D camera systems in cutting-edge ToF (Time-of-Flight) technology, to complete safety-related control systems and smart IoT-enabling devices.
